May 2022

I always felt like home doing software development, like I am naturally good at it. I have really enjoyed my time developing interesting products and working on challenging problems.

In my current role as a **contract developer** at **Synth AI labs** I am currently working on building various features based on user feedback. The app is currently in ealy access but we are currently accelerating towards a proper launch.

During my previous role as a **Tech lead at Bikayi** I managed a team to build new features into an existing product that helps small and medium sized businesses to build their own storefronts. Our role was to explore new areas in which the company can expand its wings. This involves quick MVPs that are scalable if the feature really sticks. We built the features with an amalgamation of various new technologies.

I worked with a UK based company called **Loqbox**, as a **Tech lead**. What's interesting about my work at loqbox is, here is where I learned to work with a proper team and lead them to build awesome cool features and products. I learnt to work on highly time sensitive production level bugs. I started off as yet another developer and climbed the ladder to owning the technical side of a product in less than a year.

My very first job was at a very early stage startup called **Veda.ai** as a **Founding engineer.** It was a **2-person startup** and I owned end-to-end development of everything. With a lot of course corrections from the founder I was able to build great products. This was my favorite work of all the experiences I have. I got to use cutting edge technologies to build features I've never seen before and till now. I got to explore a lot of good problems and to come up with solutions, I often broke sweat.

Thank you for your time and consideration. I will be looking forward to seeing what you have to offer. An ideal environment for me is where I have the liberty to talk my guts out about anything and everything that helps build something better.I am looking forward to strengthening my product building skills along with my technical skills to become an all round manager.

Sincerely,
Sai santosh K
